

DEVI Validate

Prove the evidence has not changed

An offline, read-only evidence hash checker. It recomputes hashes and compares them with values from another tool or process.

At a glance

VERSION
v1.0.3

RELEASED
10/07/2026

PLATFORM
Windows (x64)

STATUS
Shipped

- Offline
- Read-only
- Signed for Windows
- A PDF record of every check

Validate it under your lab's own procedures.

Key capabilities

- ✓ **SHA-256, SHA-1, and MD5**
Recomputes hashes with any of the three algorithms.
- ✓ **Match, Mismatch, Missing, and Extra results**
Every file is reported with one of these four results.
- ✓ **A validation package**
One folder and zip with the JSON record, the PDF, and a manifest of hashes, tool version, case details, and UTC and local times. The PDF carries a QR code and a short verification code.
- ✓ **A built-in self-test**
A self-test runs from inside the app.
- ✓ **Sum files, CSV, and FTK Imager logs**
Reads recorded values from these formats.
- ✓ **A PDF verification record named by hash**
Exports the result of a verification as a PDF.
- ✓ **Offline package check**
Re-verifies a package later, in the app or with the command-line tool, without a network connection.
- ✓ **Offline and read-only**
Hashing and verification work without a network connection, and evidence is opened for reading only.

Requirements

Operating system	Windows (x64)	Runtime	Included in the download. No separate .NET install is needed.
Network	Not needed to verify evidence. Used only for the optional update check.	Installer	71 MB
Portable zip	95 MB, no install needed	Code signing	Authenticode-signed through Microsoft Artifact Signing, with a timestamp.

Verify the download

Each published file has its SHA-256 on this page, with the Windows commands to check it.

DEVI-Validate-Setup-1.0.3-win-x64.exe `f9359d1e126ad72bbc8cda8e8cfc9407d15258c0d905e922cacf780e5c865ecc`
`Get-FileHash .\DEVI-Validate-Setup-1.0.3-win-x64.exe -Algorithm SHA256`
